```java
public class LinearEq {
public static void main(String[] args) {

  double a= Double.parseDouble(args[0]);
  double b= Double.parseDouble(args[1]);
  double c= Double.parseDouble(args[2]);
  System.out.println( a + " * x + " + b + " = " + c);
  System.out.println("x = " + ((c-b)/a));
}
}
```
